

FecalSwab™

Collection, transport & preservation system for enteric pathogens

Copan FecalSwab™ is intended to collect fecal specimens and preserve enteric pathogenic bacteria's viability during transport to the testing laboratory. In the laboratory, FecalSwab™ samples are processed using standard clinical laboratory operating procedures for culture.

FLOQSwabs®

Ensure a quick, capillarity-driven sample uptake and a superior elution of the biological specimen, expanding downstream diagnostic testing capabilities.

Easy to transport

FecalSwab™ simplifies fecal sample collection, transport, and processing. Its shatterproof tubes are a compact and neat alternative to large, bulky transport containers.

Automation compatibility

FecalSwab™ allow to test solid or semi-solid fecal specimens with automatic specimen processors, in space-saving, instrument-ready tubes.

Rectal and stool sampling

FecalSwab™ can be used by medical staff to transfer an adequate quantity of sample from the primary stool collection container or to directly collect a rectal swab sample.

Preservation

FecalSwab™ Performance

Copan FecalSwab™ preserves collected specimens for 48h at room temperature or 72h at refrigerated temperature (2-8°C). In the case of *C. difficile* culture investigation, Copan FecalSwab™ preserves collected specimens up to 24h at room temperature and 48h at refrigerated temperature (2-8°C).

According to the vast scientific literature, FecalSwab™ has been successfully used for:

- Preserve samples at 2-8°C up to 5 days for molecular analysis¹
- Preserve samples at -20°C up to 1 month for molecular analysis²
- Long-term preservation of samples at -80°C for molecular analysis³

FLOQSwabs®

Cut out for everyone

FLOQSwabs® offer **variable sizes, diameters, breaking points and tip shapes to be used in plenty of applications.** This made FLOQSwabs® a well-tolerated alternative to invasive, painful, and costly collection procedures^{7,8}

**Do you have a specific application in mind?
Choose the right FLOQSwabs®!**

Laboratory

Handling and Processing

In the laboratory, sample processing can be done using manual or automated with Copan WASP¹. Samples collected with FecalSwab[™] are suitable for culture of enteric pathogenic bacteria.

Scientific literature reports sample collection transport with FecalSwab[™] prior to many downstream diagnostic assays:

- Bacterial culture^{6,8}
- Molecular-based assays^{1,10,11,12}
- Microbiome analysis^{2,3}
- Antigenic assays¹³

WASP®

Walk-Away Specimen Processor™

Copan WASP® is a truly revolutionary instrument for specimen processing for Microbiology. WASP® provides a comprehensive system encompassing all aspects of automated specimen processing, planting and streaking, Gram slide preparation, and enrichment broth inoculation.

Ordering information

Choose between different tube sizes and medium fill volumes, in bulk packs or in combination with either FLOQSwabs® or polyester fiber swabs.

| <i>Cat N.</i> | <i>Description</i> | <i>Pack size</i> | <i>Sample*</i> |
|-----------------|--|--|-------------------------|
| 470CE | FecalSwab™ for manual use, 12x80mm tube filled with 2 ml Modified Cary Blair medium + 1 regular FLOQSwabs®  | 500 pieces 10 vipaks of 50 pieces | Stool container, rectal |
| 470CE.A | FecalSwab™ for automation, 12x80 mm tube filled with 2 ml of Modified Cary Blair medium + 1 regular FLOQSwabs®  | 500 pieces 10 vipaks of 50 pieces | Stool container, rectal |
| 4E020S.A | FecalSwab™ for automation, 12x80mm rounded bottom tube, filled with 2 ml Modified Cary Blair medium + 1 regular FLOQSwabs®  | 500 pieces 10 vipaks of 50 pieces | Stool container, rectal |
| 4E048S | FecalSwab® for manual use, 12x80 mm tube filled with 2 ml of Modified Cary Blair medium + 1 regular FLOQSwabs® with stopper  | 500 pieces 10 vipaks of 50 pieces | Stool container, rectal |
| 4U031S | 12x80mm tube filled with 2 ml Modified Cary Blair medium + regular FLOQSwabs®  | 300 pieces 6 boxes with 50 tubes + 1 resealable pack of 50 stool transfer devices | Stool container |

*Suggested table. Please refer to your GLP procedures to choose the most appropriate device for the specific sampling site
